

Joule Jumpstart: Skills for Architect Advisory

Joule Desktop can run installable "skills" that automate real parts of an architect's day: BTP and landscape diagrams, AI and agentic-pattern design, architecture decision records and tech specs, Clean Core and integration checks, and discovery for architecture workshops. This is a curated shortlist aimed at what Architect Advisors actually do, so you don't have to dig through 600+.

Curated for SCM Architect Advisors · Source: Joule Hub (hub.joule.only.sap) · Snapshot: 12 Aug 2026

How to install any skill (almost instant)

1. Click **Download skill** on any card below to save the file (a `SKILL.md`, or a `.zip` for multi-file skills).
2. In **Joule Desktop**, open **Extensions**, click the **+ New** dropdown → **Add Skill** → **Upload**.
3. Drag and drop the file (or click to browse). The skill is added in about a second, then just ask Joule in plain language.

Check the "Needs" line before you install. Skills marked **Works out of the box** run immediately. Skills marked **Needs a connector** need an MCP connector (like MXP for ONE360 data, EKX, LeanIX, or the Playwright browser connector) set up first, or they won't return data. Joule flags this for you: after upload, a skill missing a required connector shows a **red dot** next to its name in the Skills list. If you haven't set up connectors yet, start with the out-of-the-box skills.

A note for architects. The diagramming and artifact skills (draw.io, arc42, ADR, tech spec) work from your input and produce editable files, so they are the fastest to adopt. The landscape, LeanIX, and RISE/HEC skills read live systems and need the relevant connector or access. A few are community-built for specific internal-IT or CPIT workflows, treat those as patterns to borrow rather than universal tools. Each card's "Needs" line tells you what it depends on.

▼ Setting up a connector (MCP) — one-time, ~1 minute

A "connector" (MCP) is what lets a skill reach live SAP data or tools — MXP for ONE360 accounts, EKX for the knowledge graph, LeanIX for the capability map, the Playwright browser connector for reading live portals, and so on. On the amber cards below, each required connector is a clickable chip: click it to open that connector's page on the Hub, where you copy its server address. You connect each one once; after that, every skill that uses it just works.

Grey chips (for example `Knowledge @ SAP (admin-managed)` or `Playwright (browser)`) need **no action from you** beyond a one-time setup, or SAP pre-provisions them. Only the **blue chips** are ones you connect yourself.

To add a connector in Joule Desktop:

1. Open the **Extensions** panel (puzzle icon in the sidebar).
2. Click the dropdown arrow next to **+ New**, then **Add Connector**.
3. Paste the connector's **server address** (from its Hub page — click a chip below to find it) and click **Connect**. Joule auto-detects transport and authentication.
4. Your browser opens a sign-in page — log in with your SAP account if prompted, then click **Allow** on the consent screen.
5. The tab closes and the connector shows as **Connected**. Done — sign-in is a one-time step per connector.

Browse all available connectors any time at hub.joule.only.sap/mcp-servers. Some connectors require SAP VPN (your SAP PC's GlobalProtect handles this automatically) and, for a few (LeanIX, for example), access is by invite or request — the connector's own Hub page has the detail.

1. Architecture Design & Diagramming

From plain English or a reference pattern to a professional, editable diagram. The design skills work out of the box; the landscape reader needs the browser connector.

SAP Architecture Designer v1.0

407 installs

Works out of the box

Converts plain English, SAP reference-pattern names, or screenshots into professional SAP BTP architecture diagrams (.drawio). Maps every service to official SAP icons, applies Fiori Horizon colors, correct BTP topology, and labeled protocol arrows. Supports S/4HANA, AI Core, Integration Suite, and more.

Needs Nothing to start. Produces an editable .drawio file.

Try saying `Design a BTP architecture for [scenario]`

↓ Download skill

[View on Hub →](#)

Drawio v1.1

287 installs

Works out of the box

Creates and validates draw.io diagrams in XML format, for architecture diagrams, flowcharts, or any diagram you want to open and edit in diagrams.net. A general-purpose companion to the SAP-specific designer.

Needs Nothing. Output opens in diagrams.net.

Try saying `Create a draw.io diagram of this flow`

↓ Download skill

[View on Hub →](#)

customer-360-landscape-diagram v2.0

26 installs

Needs a connector

Playwright (browser)

Navigates to the SAP Customer 360 Workspace for a given customer number, extracts the Cloud Systems and On-Premise System Landscape details, and generates a validated draw.io landscape diagram with colour-coded swim lanes. Turns a customer's real landscape into an editable picture.

Needs Playwright browser connector + Customer 360 access + SAP VPN. Community skill.

Try saying `Build a landscape diagram for customer [number]`

↓ Download skill

[View on Hub →](#)

DiagramIQ v1.0

24 installs

Works out of the box*

Turns an existing architecture diagram into an interactive HTML visualization with animated flows, clickable nodes, and expandable detail panels. Good for making a static blueprint presentable in a review.

Needs A diagram as screenshot works with no connector. *Passing a diagram by URL needs the Playwright connector. Community skill.

Try saying `Make this diagram interactive`

↓ Download skill

[View on Hub →](#)

2. AI & Emerging-Tech Architecture

Advise on where embedded AI, custom models, GenAI, and agentic patterns fit, and design them soundly. The advisors work out of the box; the use-case builder pulls live data.

SAP AI Architecture Advisor v1.0

689 installs

Works out of the box

Acts as a senior SAP AI architect across SAP BTP, Generative AI Hub, HANA Cloud Vector Engine, and Joule agentic workflows. Evaluates AI designs for latency, cost, Clean Core compliance, and agentic interoperability, useful when advising on an AI architecture choice.

Needs Nothing to start.

Try saying Review this SAP AI architecture for cost and Clean Core fit

↓ Download skill

[View on Hub →](#)

Enterprise AI Architecture Advisor v1.0

71 installs

Works out of the box

Turns accepted enterprise AI use cases into governed implementation blueprints. Recommends the right mix of deterministic services, Joule skills or agents, workflows, RAG, MCP, A2A, and event-driven patterns, while defining CAP-versus-LLM responsibilities, human approvals, security, evaluation, and observability.

Needs Nothing to start.

Try saying Turn this AI use case into an implementation blueprint

↓ Download skill

[View on Hub →](#)

Agent Use Case Builder and Validator v4.0

180 installs

Needs a connector

MXP

AVA

SAP Jira

Aha

Guides you through a structured use-case evaluation and agent-design process: validates agentic potential, checks for existing matching capabilities, optionally designs the agent, produces a brand-compliant SAP PowerPoint, and generates a copy-ready Joule Studio intent. Bridges innovation scouting to a buildable design.

Needs AVA, MXP, SAP Jira, and Aha connectors for the full flow. Community skill.

Try saying Evaluate and design an agent for [use case]

↓ Download skill

[View on Hub →](#)

autonomous-enterprise-assistant v1.0

102 installs

Needs a connector

MXP

Knowledge-grounded assistant for SAP's Autonomous Enterprise vision, evolved portfolio (Joule, Autonomous Suite, Industry AI, Business AI Platform, Agent-led Transformation), and its EA positioning, with objection handling. Helps you carry the strategic narrative into an architect conversation.

Needs MXP connector. Built by the Enterprise Architecture Excellence team.

Try saying Explain SAP's Autonomous Enterprise vision for an EA audience

↓ Download skill

[View on Hub →](#)

3. Architecture Artifacts & Decisions

Produce the written record: blueprints, decision logs, and specs that survive the handoff to delivery. All work out of the box.

Architecture Document (arc42) v1.0

47 installs

Works out of the box

An arc42-structured architecture documentation artifact covering system context, solution strategy, building blocks, runtime and deployment views, cross-cutting concepts, and quality requirements. The full blueprint in a recognized standard.

Needs Nothing. Community skill (EA artifact set).

Try saying Draft an arc42 architecture document for [solution]

↓ Download skill

[View on Hub →](#)

Architecture Decision Record v1.0

40 installs

Works out of the box

A structured document that records a significant architecture or technology decision: its context, the alternatives considered, the rationale, and the resulting consequences and trade-offs. Keeps the "why" behind a design defensible later.

Needs Nothing. Community skill (EA artifact set).

Try saying Write an ADR for choosing [option A] over [option B]

↓ Download skill

[View on Hub →](#)

Tech Spec Writer v1.0

81 installs

Works out of the box

Converts rough ideas into rigorous, engineering-ready SAP technical specifications. Enforces Clean Core, SAP BTP architecture (CAP/RAP), Principal Propagation, and Fiori UX standards, so the spec is delivery-ready and standards-aligned from the start.

Needs Nothing.

Try saying Write a technical spec for [feature]

↓ Download skill

[View on Hub →](#)

Business Capability v1.0

52 installs

Works out of the box

A structured description of a stable, outcome-oriented business capability aligned to the LeanIX meta model, capturing what the organization can do (independent of how or who) to enable strategic planning, portfolio management, and application rationalization.

Needs Nothing. Community skill (EA artifact set); pairs with LeanIX.

Try saying Define the business capability for [area]

↓ Download skill

[View on Hub →](#)

4. Platform, Clean Core & Integration

Enforce standards and understand the platform: RISE/HEC topology, Clean Core, and OData integration surfaces. Some read live systems, so check the "Needs" line.

rise-hec-architecture v1.0

52 installs

Works out of the box

SAP RISE/HEC architecture reference and customer-investigation workflow. Covers component taxonomy (CGS, CSN, CIS, CMS, FWaaS), system ID formats, and the steps to check or investigate a RISE or HEC customer environment. A grounding reference when advising RISE customers.

Needs Nothing to start (reference workflow). Community skill.

Try saying Explain the RISE/HEC architecture components

↓ Download skill

[View on Hub →](#)

RISE Clean Core Upload v1.0

40 installs

Works out of the box

Automates importing ABAP Test Cockpit (ATC) results .zip files into the SAP Cloud ALM Clean Core Dashboard. Collects all inputs in one prompt and drives the full workflow, instead of manual browser steps, so Clean Core evidence lands where governance expects it.

Needs An ATC results .zip and Cloud ALM access. Community skill.

Try saying Upload these ATC results to the Clean Core Dashboard

↓ Download skill

[View on Hub →](#)

Extract OData from URL v1.0

77 installs

Works out of the box

Given a web page URL, discovers all OData services on the page, extracts their signatures (entity sets, keys, properties, navigation, function/action imports), fetches live \$metadata XML, and produces a Markdown report plus a ready-to-use Postman collection. Speeds up integration-surface discovery.

Needs A URL to inspect. Community skill.

Try saying Extract the OData services from [URL]

↓ Download skill

[View on Hub →](#)

SAP Discovery center v1.0

150 installs

Works out of the box

Answers questions about the SAP Discovery Center: BTP services, Business Data Cloud services, Business AI features, Missions, and Reference Architectures, including pricing and service plans, filterable by product. A fast lookup for platform services and reference patterns.

Needs Nothing (uses built-in web access).

Try saying What BTP services fit [scenario], and what do they cost?

↓ Download skill

[View on Hub →](#)

Clean ABAP v1.0

community

Works out of the box

Applies the Clean ABAP coding-standard guidance to review or write ABAP that aligns with SAP's Clean Core direction. A quick standards check when extensibility comes up in an architecture discussion.

Needs ABAP code to review. Community skill.

Try saying Review this ABAP against Clean ABAP standards

↓ Download skill

[View on Hub →](#)

5. Enterprise Architecture & Governance

Work the capability map and the decision record at portfolio scale. These read live EA systems, so they need the relevant connector and access.

leanix-navigator v3.0

83 installs

Needs a connector

LeanIX (by invite)

Queries and analyzes the SAP Product Capability Map via natural language: search capabilities, inspect fact sheets, and navigate the LeanIX model conversationally. The fast way into the capability map without clicking through the UI.

Needs LeanIX MCP connection; workspace access is by invite only.

Try saying Find the capabilities under [domain] in the map

↓ Download skill

[View on Hub →](#)

ask-ea v1.0

14 installs

Needs a connector

SAP Jira

LeanIX

GitHub Tools

Answers architecture questions as the SAP CPIT Enterprise Architect, grounding every answer in three live sources at once: the AI & Data Management GitHub docs, the ITDAA Jira ARB decision log (approved/closed only), and the LeanIX capability map with ownership. Internal-IT flavored, but a strong pattern for grounded EA Q&A.

Needs SAP Jira, LeanIX, and GitHub Tools connectors. Community skill, scoped to CPIT Internal IT.

Try saying What did the ARB decide about [topic]?

↓ Download skill

[View on Hub →](#)

6. Discovery, Presales & Roadmap

Surface true requirements, validate fit, and align to product direction. The briefing and discovery skills pull live account and knowledge data.

Value Discovery Questions Generator v1.0

65 installs

Needs a connector

MXP

EKX

Generates focused, persona-aligned discovery questions for customer workshops. Combines your context (notes, architecture, pain points) with account-briefing research, ONE360 Customer Overview data, and EKX knowledge enrichment. Sharpens the discovery that precedes any architecture proposal.

Needs MXP + EKX for the enriched version; runs on your context alone otherwise.

Try saying Generate discovery questions for a workshop with [customer]

↓ Download skill

[View on Hub →](#)

Detailed Account Briefing v1.0

213 installs

Needs a connector

EKX

A comprehensive, evidence-tagged account briefing: company profile, financials, strategy, leadership, competitive landscape, risks, and SAP implications, built from parallel web-research subagents with EKX validation. The technical-fit and stakeholder context before an architecture engagement.

Needs EKX MCP connected. Uses built-in web search.

Try saying Account briefing on [company]

↓ Download skill

[View on Hub →](#)

SAP Roadmap search v1.0

218 installs

Works out of the box

Searches SAP product roadmap items from roadmaps.sap.com by product, topic, status, or time period, returning feature name, description, category, expected quarter, and status. Aligns what you design today to where the product is heading.

Needs Nothing (uses built-in web search).

Try saying What's on the roadmap for SAP Integration Suite?

↓ Download skill

[View on Hub →](#)

Business Case v5.0

158 installs

Needs a connector

EKX

Guides a value-advisory business case through a 20-step, approval-gated workflow from intake and evidence research to a brand-compliant SAP PowerPoint, with value modeling and quality audits. Useful when architecture fit has to be justified commercially.

Needs EKX MCP for SAP-claim validation. Hands off to the SAP Corporate PPTX skill for the deck.

Try saying Build a business case for [engagement]

↓ Download skill

[View on Hub →](#)

7. New to Joule? Start Here

If Joule Desktop is brand new to you, these two get you oriented fast.

Joule Onboarding & Migration v2.0

783 installs

Works out of the box

Conversational setup that either migrates config, memory, and MCP mappings from another AI tool (Claude, Cursor, ChatGPT, Copilot) or guides a first-time user to build Joule memory from scratch.

Needs Python available on the machine. No MCP.

Try saying help me set up Joule

↓ Download skill

[View on Hub →](#)

Teach Me Joule Desktop v1.0

722 installs

Works out of the box

Joule Hub (admin-managed)

Interactive, adaptive 9-module course on Joule Desktop: installation, Outlook/Calendar/PPT integrations, Spaces, skill and MCP installation, custom MCP config, usage and cost tracking.

Needs Uses the Joule Hub connector, which SAP pre-provisions (admin-managed), so there's nothing to set up.

Try saying teach me Joule Desktop

↓ Download skill

[View on Hub →](#)

Browse the full catalog (600+ skills and MCP servers) at hub.joule.only.sap. Install counts are a snapshot from 12 Aug 2026 and change as adoption grows. This shortlist is curated for SCM Architect Advisors; it is not the full library. Several skills are community-built for specific internal-IT, EA, or RISE workflows, check each skill's Hub page for exact scope and access before relying on it.

Download links: each "Download skill" link pulls the skill file (a .md, or a .zip for multi-file skills) straight from the Joule Hub; then Upload it in Joule Desktop (Extensions → + New → Add Skill → Upload). The links require the SAP network, which your SAP PC's GlobalProtect VPN connects automatically.

Designed and powered by Mike Fecek and Claude.
